

RAHUL SONI

Backend-Focused Full-Stack Developer • Node.js • Express • MongoDB

Jaipur, India (open to relocation) | +91-9024141779 | rahulsoni66676@gmail.com

github.com/rahulsoni070 | linkedin.com/in/rahulsoni0707 | rahulsoni.vercel.app | rahulsoni070.hashnode.dev

SUMMARY

Backend-focused CSE student who builds and deploys Node.js/Express REST APIs on MongoDB (OAuth 2.0 + JWT auth, role-based access, file uploads, real-time Socket.IO). Seeking SDE / backend internship and new-grad roles.

EDUCATION

B.Tech, Computer Science Engineering — JECRC University, Jaipur

2023 – Jun 2027 (expected)

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C++, C, TypeScript

Backend: Node.js, Express.js, REST API design, JWT, Google OAuth 2.0 (Passport.js), bcrypt, role-based access control, Socket.IO, Multer, Cloudinary

Databases: MongoDB, Mongoose (schema design, indexes, aggregation pipelines), MongoDB Atlas

Frontend: React.js, Redux, React Router, Axios, HTML5, CSS3, Bootstrap, Recharts

Tools: Git, GitHub, Postman, Vercel, Render

Core CS: Data Structures & Algorithms (C++), OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

KaviosPix — Photo Management REST API (Google Photos-style)

[Live](#) | [GitHub](#) | Sep 2026

Node.js, Express 5, MongoDB/Mongoose, Passport.js (Google OAuth 2.0), JWT, Multer, Cloudinary, React

- Designed a **16-endpoint REST API** for albums, images, tags, comments, favorites and album sharing, with owner vs. shared-user permissions enforced by reusable access middleware and album-scoped queries that prevent IDOR.
- Implemented **Google OAuth 2.0** sign-in with Passport.js issuing stateless JWTs, and a Multer → Cloudinary upload pipeline (5 MB limit, MIME + extension checks) that rolls back the cloud file if the DB write fails.
- Added paginated, regex-escaped tag search backed by **3 compound indexes**; hardened the API with Helmet, a CORS allowlist, rate limiting (100 requests / 15 min) and a 10 KB body limit. Deployed on Render + Vercel.

Anvaya CRM — Lead Management REST API & Dashboard

[Live](#) | [GitHub](#) | Aug 2026

Node.js, Express 5, MongoDB/Mongoose, JWT, bcrypt, React, Recharts

- Built **19 REST endpoints** across 6 modules (auth, leads, sales agents, comments, dashboard, reports), secured with bcrypt hashing and 7-day JWTs: 17 routes sit behind auth middleware and 6 are admin-only (401 / 403).
- Wrote a **server-side query layer** for leads with 5 filters (status, priority, agent, tags, text search), 8 whitelisted sort orders and paginated responses with total counts.
- Built pipeline reports with **MongoDB aggregation** (\$match, \$group, \$lookup, \$project), charted in React with Recharts; explained the login flow in a [Hashnode article](#).

Real-Time Chat App — One-to-One Messaging

[Live](#) | [GitHub](#) | Sep 2026

Node.js, Express 5, Socket.IO, MongoDB/Mongoose, bcrypt, React

- Built a real-time chat server on **Socket.IO** with per-user rooms and acknowledgement callbacks that confirm each saved message to the sender.
- Implemented **sent → delivered → read** receipts persisted in MongoDB and live typing indicators over 6 client and 5 server socket events. Deployed on Render + Vercel.

Also built: [Workasana](#) (task-management API: 18 endpoints, 5 models, JWT) • [ShopEasy](#) (React e-commerce store)

ACHIEVEMENTS

- Participated in **Smart India Hackathon (SIH) 2024**, a national-level innovation competition.
